A UNIQUE ODYSSEY

FRAGMAG 2021

START-UP EDITION

GIRISH BATRA START-UP

Girish Batra an Alumni of Fr CRCRE (1993 batch BE Electronics) is co-founder Sarthy Upstart Pvt Ltd (www.sarthy.vip) . We work as Venture Investment Partners for Startups.

He is also a high energy leadership coach, mentor, and advisor to entrepreneurs. In his 25 years of corporate experience prior to his current roles, he acquired expertise in the areas of Product Management, Business Development, and Team Building where he led teams to deliver sustainable growth with MNCs and Indian companies. Girish was also the co-founder of an innovative start-up in real estate.

He is a trained Design Thinking practitioner. He speaks at various leadership forums and prestigious B- schools.

Girish is a volunteer for livingmypromise.org supporting its development and growth in India. He also engages with various NGOs to support them for different social causes.

Below are excerpts from his book Experiments in Leadership. You can buy the book on Amazon, Flipkart, other physical and online stores.

The Times They Are a Changin'

This is one of my favourite chapters, and I enjoyed writing every paragraph of it. It talks about how change is the new normal in the 21st century.

'Change is hard at first, messy in the middle and gorgeous in the end'

– Robin Sharma

In the last chapter of Eric Schmidt's book *How Google works*, he predicts that there surely is the next innovation being born in some garage somewhere in the world which would make Google irrelevant and it is the writing on the wall which he accepts with all humility.

That is the reality of change. If the ex-CEO and current Executive Chairman of Google, one of the most valuable companies on the planet, can imagine its eventual fading away, it shows the realistic state he and the top management team have reached. Their larger vision is to see the **world as a better place** to be in – with my product; without my product no problem.

In my early career in the '90s, I had attended a Change Management Workshop, and the trainer put the issue for discussion of "How to Manage Change." There were various opinions floating on Predicting change, Proactive action, etc. when I blurted out, "**Create change.**" The trainer got on the backfoot. Yes, that is also possible, but it would be asking a lot from an established organisation. That was

blackberries biting the dust and being sold off at very low valuations. They were born in the highly volatile tech industry where change is the order of the day. Why were they not able to keep pace with change?

Somehow **success has this poor record** of making the incumbent **relax**, enjoy the laurels and act slowly, reactively to the challenges coming from unknown sources. The incumbent likes to play by the book. And before you realise what is happening, the new idea from an unknown company is a rage and the incumbent is left with a stagnating business which s/he then prepares to reinvent.

I don't believe in **reinvention** and rather suggest to die small, die peacefully and die with minimal loss to reputation and bank balance and with limited damage to the ecosystem.

And change spreads amongst customers like **wildfire**. In 2005, Videocon bought the CRT factory of Thomson in Europe. Flat panel LCD televisions had recently hit the market, and the developed world was shifting to LCDs. Videocon thought that India is a poor country and it would take a minimum 10–15 years for LCDs to make a mark in India. They can keep selling cheap CRT televisions to Indian customers. But in reality, the shift happened in less than 5 years, and rural Indian customers were buying bigger size LCD/LED televisions as the price gap was low and the price of LCD/LED televisions was declining year on year.

If the developed world buys 4G phones, Indians will buy 4G phones after maybe a 1–2 year lag max. i.e. the time gap between the developed world and developing world adapting to innovation has reduced significantly.

How can a chapter on change continue without talking about our dear **Change Leader Steve Jobs**. Can you believe one person revolutionised multiple industries, products viz – computer, mobile phone, television, music, photography, etc.?

How can a computer company revolutionise the mobile phone industry? Yes, it can! In fact, it has forced a new language of **convergence** to come into play wherein you see how your nearby industries will converge into one in the future. iPhone was launched in 2007 in the US, and 10 years later a lower-middle-class person in a developing country like India has a similar or even better phone in his hand at one-tenth the price of the 2007 iPhone. That is the **power and global magnitude of change**.

Did Apple spend millions of dollars on advertising its products? No. Traditionally Apple has the lowest marketing budget to turnover ratio in the industry. Does it have the best distribution network? No. Till 2009, it didn't even have a proper distributor for India, and all the iPhones were sold through the grey market. That is the **pull** of innovation. You don't need to run after customers. They run after you and stand in queues overnight to own your product.

Is change easy? Try doing menial tasks with your wrong hand for one hour. Easy na? No. So, it is difficult.

Change is a reality with which all organisations and leaders have to live, whether they like it or not. I was lucky that in my twenty-year career I had ~10 roles. My role changed on an average every two years. So, now I get the itch for change and am always confident it is for the better. I may initially feel depressed, a little out of place, but once I settle in, it is WOW. At the same time, if I have spent too much time in a role, the ideas are the same, and the people around are the same, so after the third-year things start smelling stale and I dive towards the exit.

And change is a reality until death. My Dad in his fifties resisted learning computers. He loved doing his accounts and maintaining ledgers and files manually. Now in his seventies, he is more active on WhatsApp and Facebook than me. That's changed.

Also, change will rarely come from the leader in an industry. The No.2 and No.3 in the industry have a much better chance. But it is highly probable that an unknown player will shake up the industry and create a new category in itself. Still, there are a few industries like FMCG where the leader has the highest market share for decades. Yes, but the list of such industries and companies is shrinking. Earlier customers were brand loyal, but with millennials, loyalty is for dogs. They will go with the next hit. In fact, they discover the next hit product or service before anyone else does.

How to Breed a Culture where Change Thrives and is welcomed?

Well, this is tough. Change comes from a childlike curiosity and fearless mental state where the transition from here to there is sudden and effortless. Like it was for Newton when an apple fell on his head or for Archimedes when he was nude in the bathtub. Both led to great discoveries.

My apartment overlooks a children's play area, and the number of uses a play equipment is put to is infinite. Every child does it her or his way. And the way it moves from one equipment to another is effortless. It knows how much fun it gets from this and then from that ride and can go on playing and innovating ways to play with no worry of where its parents are, how much time it has wasted, is it doing right, etc.etc. At times, there are adults around watching over a 2-3-year-old, and they try to teach the child how to play on a particular ride. But little Johnny only wants to do it his way and will again climb from the opposite side of the slide.

Fuelling Innovation

This chapter defines innovation and looks at the environment necessary for innovation to vegetate in.

'Until one is committed, there is hesitancy, the chance to draw back, always ineffectiveness. Concerning all acts of initiative (and creation), there is one elementary truth, the ignorance of which kills countless ideas and splendid plans: that the moment one definitely commits oneself, then providence moves too. All sorts of things occur to help one that would never otherwise have occurred. A whole stream of events issues from the decision, raising in one's favour all manner of unforeseen incidents and meetings and material assistance, which no man could have dreamt would have come his way. I have learnt a deep respect for one of Goethe's couplets:

*Whatever you can do, or dream you can, begin it.
Boldness has genius, power, and magic in it!'*

– William Hutchison Murray

'If at first the idea is not absurd, then there is no hope for it'

– Albert Einstein

To start with, we need to define what innovation is.

(A)

(B)

A lot of times A to B (I mean the change from wooden wheels to tyres) is sold as innovation, and millions are invested in marketing it as the idea of the decade. Well, A to B is a valuable step change which surely brings more value, but it is incremental.

Some of the ideas which can be considered innovation in the last twenty years could be

1. Search by Google*
2. E-Shopping by Amazon
3. Smartphone by Apple*
4. Social Network by facebook*
5. Messaging /Sharing @free and easy through WhatsApp (although BBM was the original, but it was only for Blackberry users)
5. Watching relevant content instead of broadcasted content on YouTube
6. Taxi-hailing on Uber

All these are not step changes, but garage ideas mostly started as a project by first time entrepreneurs or students who JUST DID IT! No blueprint, no innovation lab and no idea circle. They felt they had an idea which **may** attract customers and just rolled it out first amongst a closed group and then amongst the public at large.

Notice one more critical input. None of these were heavily advertised on launch. Even today, they spend very little on marketing or selling themselves and believe that if it is a wow innovation it will attract new customers through **word-of-mouth**.

Notice another thing that most of these even today have a 50%+ share of the customers and 70%+ share of the profit of their respective domains. They have created **monopolies** in industries which did not exist or were ignored till they were born.

The number two challengers like Snapchat, Microsoft and Samsung in smartphones have tried a lot of ideas to give a plus. They've even bought declining companies and advertised heavily but to no avail. Consumers love to be with the pioneer because everyone is with the pioneer isn't s/he?

So, what is the secret of innovation and how do corporates innovate?

My recommendation is a little different. Corporates cannot and should not innovate. Why? Because our corporate hierarchies (boss knows best), the fear of failure in our teams, the politics of if you do not challenge me, I will support you, etc., is not suitable for innovation. A college student could or would do better with his summer project than an organised innovation team with highly qualified technocrats and a huge budget at its disposal.

My suggestion is for corporates to only do what they are best at doing and surely give incremental benefits to their customers. Focus only and only on milking the **cash cow** and keeping a war chest ready to buy out the new innovation around the corner **early**, and giving it a much larger platform than the start-up could have given.

Apple is kind of doing the same (milking the cash cow) with the iPhone for almost ten years now. It gives incremental benefits sold as innovation year after year.

The next secret is that **money cannot fuel innovation**. In fact, the more money put behind innovation, the more mediocre (sold as wow) the result.

As can be seen in the picture, what an innovative bullock cart (it has a spare tyre). Never seen anything like this. Customers will surely buy it and pay a premium for it. Let's advertise full-page with a special inaugural offer on pre-booking.

For innovation to survive and thrive, the culture of the place should have the following traits:

Acknowledge Failure - So many organisations are living with failed products or services because at least it is helping the top line if not the bottom line. The leader's ego is clutching on to these failed products, so these are labelled 'to take-off'.

Celebrate Failure - Must be a typing mistake. What am I talking? Celebrate failure? For succeeding one needs a zen-like attitude to failure. It is in the past. It is a reality lying in memory albeit painful. Pain needs celebration. Death too needs a celebration to **come out of it** and live with its reality.

Kill Failure early - Whatever is successful is successful early and gives positive cash flows, positive Economic Value Added (EVA) by the third or fourth year max, else it is a failure, and it will never be successful by downsizing, cost-cutting or adding frills to the products. It needs to be killed and killed quickly.

Well-Timed Pivoting – When it becomes clear that the original value proposition is not taking off, it is important to adopt a new value idea which is **derived** from the original and test market it.

The future is going to be innovated but rarely by the present incumbent. Even **Jeff Bezos**, the founder of Amazon, a 20-year-old company, is obsessed with customers in order to avoid disruption from emerging businesses. He insists Amazon is a **day 1** company after twenty years also, as day 2 is stasis followed by irrelevance. Jeff says, “Staying day 1 requires you to experiment patiently, accept failures, plant seeds, protect saplings and double down when you see customer delight.” A tough guideline for any established player with one eye on operating profit and the other on de-risking the business and defending your position.

MANTHAN START-UP

Hello everyone, It gives me immense pleasure to share my experience among our fellow agnelites.

Even though I graduated almost 4 years back it feels like yesterday sitting in the same classroom on the same benches eating in the same canteen, those memories are still fresh in my mind. And not very long ago, I too attended the annual day function hence, I can very closely relate to how each one of you must be feeling. I had similar fears, similar anxieties, similar sense of pompousness. I too was at this crossroads and I am saying this from a very personal experience. It turns out I had two offer letters from Godrej & Boyce and TCS. With a myriad of suggestions and a whole array of opinions from friends & family & immense turmoil in my heart, it took me nerves of steel to choose something that I myself would not have imagined, let alone anyone else.

The journey of Brillmax started with identifying a problem, designing a minimum viable product and launching without wasting any time. And with a blink of an eye we turned profitable. Today after 4 years we are supplying to almost all the top builders and developers in Mumbai and across India. We are also supplying multiplexes, malls, hospitals, consulates, navy, airforce, some prestigious projects like Motera Cricket Stadium etc. There is no bigger satisfaction than seeing the families of our employees and our factory workers lead a fulfilling life, also pay corporate taxes and see this country flourish. We at Brillmax strongly believe like many other professions “Entrepreneurship is Nation Building”. It would be my pleasure if I could return something back to society by helping any one of you planning to venture on your own, my coordinates are available with the college.

However, it would not do justice if I deprive you of the real picture and camouflage the other side of this coin. In the interest of being truthful allow me to

state the iceberg example. In this day and age of social media I'm sure most of you must have seen the inspiring quote showing the iceberg floating in the water where some 20% of its visible area above the water is marked as success and the remaining 80% submerged which describes Hard Work, Perseverance, Sacrifice, Sleepless Nights, Rejection, Discipline, Criticism, Doubts, Failures, Risks etc and the list goes on and on. At the risk of sounding cliché, I must admit every element of that iceberg example is true, at least for the initial 1000 days, if not longer.

But so what if there are hiccups, so what if things are not easy, a lot of you would agree engineering was not easy either. This journey makes you tough and brings out the best in you, allows you to wear too many hats of procurement, of HR, of Sales, of a Peon, of an accountant. That's what makes us feel alive, that marks the existence of a thriving human body and mind, that is what we Homo sapiens do best.

I would like to end this by saying welcome friends, a very warm welcome to all the final year students to come out of your comfort zone, leave the 9 – 5 monotony of a MNC, take the plunge in the real world and start this chaotic roller coaster ride, trust me it will be the most memorable ride of your life. As they say “The decisions you take today will determine the stories you tell tomorrow”

God bless you all
Manthan Dakshini

NIRMAL START-UP

“Pain is temporary but pride is forever”

About Me

Hi, I am Nirmal! A traveler, dreamer, entrepreneur...a human being. I am a Co-Founder of two companies - Visa Guide and Ajackus, and on an Advisory board of WAI.

I like to meet interesting people, my travels allow me to do so. People are my books, I like to read and learn from their stories. Lately, I have been trying my hands on Kalimba (Google it, not explaining what it is).

I like to brainstorm ideas, create an impact on lives as much as I can. Environment and education are two causes that are close to my heart.

My First Venture

I executed my first idea when I was in my second year of engineering, around 2009-2010. In those days, ‘Robotics’ was a new concept in the market. I sensed an opportunity to convert our technical skills into a ‘good pocket money making’ endeavor.

I gathered a few friends from other colleges, reached out to schools saying we will teach their students robotics. We received positive responses from 2 schools, within a couple of weeks, we had conducted 3-4 sessions with almost 100+ students.

We never thought of continuing it after our initial success, maybe we were content with the money we made, and lacked business acumen (read lacked maturity - business acumen just sounds cooler). Looking back, we truly had fun working on it.

The Journey

I had taken up a job with TCS when I graduated (crazy story behind it, some other day), though it is an IT company, I have never coded in my life. My first deputation was in Chennai, in 2012-13 they used to say that if you survive Chennai, you can survive anything.

Anyway, within the first year itself, TCS had initiated my visa for the US. I moved to the US in 2015. The US had a good stint. But, in my heart, I always knew that I was coming back to start my own business. One fine day, I submitted my resignation, came back to India, and started a Visa Guide.

A lot of people still think it was a crazy move. Where people are struggling to get the H1B, I just threw it away to come back HOME. Let's say I had my own reasons (again, story for some other day).

Success

The definition of success varies for people, for someone what money could be is fame for someone else, and simple life with family for the other. Create your own definition of success and evaluate yourself on that, if you evaluate your success from other people's perspective then you'd not be succeeding ever. Success is subjective.

The majority of people look at success with money, power, and fame. However, one should look at it as happiness, health, compassion, and evolution. The moment you understand the difference, you have taken the first step towards success, circumstances were difficult, health had deteriorated due to long work hours, hair was showing signs of Grey, and my bank account showed INR 440.

However, as a leader, your team looks up to you, all the time. You need to have the answer even if you don't know the answer. There were only two options, to leave everything and go back to the life of the job, or restructure the whole system by focusing energy on the right things.

Today, I am grateful for choosing the latter, and for the team that believed in me. I think patience, perseverance, and planning helped us survive the battle. There are so many stories of me hitting rock bottom, I could share all of them, but the editor of this page has told me not to bore you all with sad chronicles.

Have An Idea?

If you have an idea, talk about it with people who are believable. When I say believable, not the people you like or who like you, but people whose questions and opinions would be directed after understanding what you have to say.

This will help you with two things, one, you will get clarity on your idea. Two, you will start connecting the dots and get answers to the questions that you didn't have earlier or you hadn't thought of.

Few Pointers For When You Start

- 1.) Skills can be taught but attitude can't be bought.
- 2.) Sometimes a good game is the one that is played.
- 3.) Personalization is the key, don't just contact but connect.
- 3.) In the pursuit of perfection if you don't start the journey then you'd not know how far you are from the destination.
- 4.) The war is not won with the best resources, it is won with the skills to use the available equipment in the best possible way.

My Ikigai

I firmly believe that people's Ikigai changes from time to time, at least mine do. Some of the aspects remain constant, but others evolve from time to time depending on your learnings and personality development.

I have felt more fulfillment by helping farmers in mountainous areas by designing simple tools for them as compared to closing hundreds of thousands of dollar deals. But, in a holistic sense, if I have to put my Ikigai in a few words, I would say that it is 'to make a positive impact', it could be a tiny change in someone's life or a macro level initiative impacting a large population, creating that impact is my Ikigai.

RASIKA VIRKAR START-UP

"It all begins with a step towards humanity!"

I grew up in a small village where people were unaware of health care. Over the past four years, I have been studying yoga. I made the most of the free time that I got during the pandemic by doing my bit towards society. I taught senior citizens basic Yogasanas and how to use yoga to strengthen their physical and emotional well-being by giving them some yoga tips. This is when I realised I wanted to do something for our society.

This pandemic situation has been extremely brutal. I have witnessed people pining for food and water and not having anyone to help them because they didn't want to risk their health. I witnessed people let go of their basic moral values, and let other people just fend for themselves. That is when I decided I could not just sit idle, I needed to help these people in any way I could.

I learned stitching from my mom and used my skills by preparing handmade masks. I distributed them to those in need initially-who couldn't afford them. More than that happiness I got by pushing to find my very best self in this lockdown, I was happy I finally could use my skills to do something better for the people. In return, they gave me a lot of blessings. The smile on their faces made me feel like I have accomplished something. It felt content to know that a little effort from my side can help others and make a difference. I urge you all to contribute in every little way possible to society so that our world can become a better place to live in!

Today as I see myself as an entrepreneur, I am proud of all the choices I made. The lockdown made it very difficult for me to reach out to people, but I used social

media platforms to endorse my masks. My friends and family always supported me, pushed me to work to the best of my ability. They contacted everyone in their network to make them aware of my business. My drive to help people and the support I have received from numerous people is what keeps me going today, irrespective of the challenges the lockdown provides. I have found my ikigai through my venture, and I would appreciate your guidance further to help me sustain it.

I request you all to help with this small initiative of mine. Please contact me at my email **rasikavirkar05@gmail.com** to enquire more about my business.

DDHAIRYA GANDHI START-UP

The modern world is dictated by the monopoly of the capitalist thought and ideal: an economic system built on the belief of trade and commerce between two individuals without the threat of coercion and bondage. Of all the benefits conferred upon us by capitalism, the idea of a person being able to build his own business from the bedrock is perhaps viewed by the most decisive of men as the best. This idea is known by its popular name: start-ups.

College students such as me, are attracted to this lofty idea, and if bereft of advice and counsel, we – are unwittingly drawn towards it: much like the drab grey moths to the flickering red tongues of fire. Much like fire is grown and fed by an ever-increasing amount of faggots: my desire to learn and engage in the practice of entrepreneurship has led me to start my own business; and the selfsame desire to stand independent – in thought and wealth – has led me to search for ever-new arenas to gain and garner knowledge: such as writing these words and hoping for feedback for my own business strategies – that were inculcated and purified much like the purest silver – through intense trials of fire and profession: purifying and refining those age-old orthodox strategies to mold them to the needs of the modern world.

Now indeed, entrepreneurship requires immense capital, but for the one devoid of economics, Pierre Bourdieu provides man with social and cultural capitals – that which do not require one to be a scion of a wealthy House nor for one to have won the genetic lottery. An enrollment into an institution as privileged as ours provides us with the opportunity to meet and build connections which allow one to develop entrepreneurial skills.

However, for start-up entrepreneurs like me, there are much greater and more computational mechanisms in place. I utilize LinkedIn to build and foster lasting connections with potential clients and businessmen through whom I have learned tricks of the trade. Yet, amongst us are those who are afraid of taking the leap of faith to start their own venture, and to them I proclaim:

“Cast down your frowns, for although you might be white-livered and of choleric disposition; your want of skill can still be offset by start-up firms: who seek unending toil and a constant desire to learn rather than a large retinue of knowledge and poor work ethic.”

But enough elucidation on the hiring and skillset of start-up firms, after all, I am a businessman: here to present you a brief glimpse into my business and how often problems requiring creative solutions come about. Unlike most major corporates and companies in which major business issues are solved by a group of shadowy technocrats, I (like most entrepreneurs) like to keep an open mind and I respect the opinions of my employees: thus, unlike most corporation who have a horizontal hierarchy, I keep a vertical hierarchy allowing for an easier discussion and dissemination of ideas and policies. An advantage of this is: brainstorming allows for my interns and employees to find out the flaws and mistakes in their thinking, and allows me – to learn different thinking and analytical tactics.

Unknown or known to you, I run a plastic enterprise, SKI Plastoware Pvt. Ltd. has had a fair sum of the myriad issues that plague industry: and in our nation, there is no problem as vile and devious as that of labor unions. As an entrepreneur this plague of locusts often leads to the arrival of political powers indulging in the affairs of business. A recent fire at my factory put that all to the test, as costly maneuvering, corruption and political pressures tackled me head-on. It took a tremendous amount of slyness and shrewd work to get my factory back up and running.

During the past years, I have had severe problems with regards to clients turning back orders due to COVID-19 disturbing the economic situation of our nation. Non Paying clients, clients who turned down orders: these were the worst: Indeed Scylla and Charybdis were better choices to Odysseus than this choice to me: but slow and soft words, humble kneeling and quaint courtesies – all matters of diplomacy led to an amicable solution.

Internships led me to find favor amongst MNCs in which I developed and fostered contacts in the industry: and thus when in my early days, shopkeepers spurned me as one does a mongrel cur in the hot streets of busy Bandra, my contacts helped me rise from the mud of obscurity to being an entrepreneur raking profit upon profit.

My tales exceed the ears, but I must stop now. Please do contact me at either my LinkedIn account [**Ddhairya Gandhi**] or my email at [**gandhiddhairya@gmail.com**].
